## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 101***

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-19 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The claims are directed to a method, process or system for performing an interpolation, i.e. a data transformation, via a mathematical algorithm. The claims are not limited to a practical application of the mathematical algorithm because the transformed result is not a useful, concrete and tangible result. More specifically the result is not a tangible result because it is not a real-world result. Also the claimed invention does not physically transform an article or physical object to a different state or thing because the transformation is merely a data transformation.

### ***Claim Rejections - 35 USC § 112***

2. Claims 1-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Lines 3-4 of claim 1 incorrectly imply that the selected two-dimensional interpolation function is based on or a function of the sampling function, i.e. different sampling functions would result in different two-dimensional interpolation functions. Also in claim 1 the meaning

of the phrase "a Cauchy integral theorem being applicable for the interpolation function" is unclear. Claims 18 and 19 contain deficiencies similar to claim 1.

***Specification***

3. On page 5 paragraph 21 is incomplete.
